

School of Physics & Astronomy

Head of School Professor Andrew Cameron

Taught Programmes

M.Sc.: European Master of Science in Photonics (EMSP)
Photonics and Optoelectronic Devices
Physics

Eng.D.: Photonics

For all Masters degrees there are exit awards available that allow suitably-qualified candidates to receive a Postgraduate Certificate or Postgraduate Diploma.

Programme Requirements

European Master of Science in Photonics (EMSP) M.Sc.

This is an international two-year Masters programme in Photonics. Students spend their first semester at the University of Ghent, the second semester at Vrije Universiteit Brussels, and then attend a short summer school at one of the partner institutions. The rest of that summer may be used for vacation and/or a relevant internship. At the start of the following academic year (i.e. third semester of the programme) the students all study at St Andrews. The fourth semester is spent entirely on a research project, which may be at St Andrews, Ghent, KTH Stockholm, Vrije Universiteit Brussels, or associated institutions.

The semester in St Andrews consists of a research skills module, an advanced photonics lab module, and a number of optional advanced modules on aspects of photonics. There are strong links between our research activities and the teaching of this M.Sc.

St Andrews Taught Element: 28 credits (14 ECTS): PH5260 and PH5262

32 credits: (16 ECTS): PH5263 - PH5269

60 credits (30 ECTS): PH5261

Photonics and Optoelectronic Devices M.Sc.

www.st-andrews.ac.uk/physics/msc

The primary aim of this one-year, full-time programme is to provide specialist postgraduate training in modern optics and semiconductor physics, tailored to the needs of the Photonics industrial sector. The secondary aim is to provide the education required for those wishing to continue in academia on Ph.D. research projects in photonics. There are strong links between our research activities and the teaching of this M.Sc.

Graduates from the programme will have gained an in-depth understanding of the fundamental properties of optoelectronic materials and practical experience of the technology and operation of a wide range of laser and semiconductor devices. They will additionally have had experience of research, usually in an industrial environment, and have received training in the transferable skills required in such an environment.

Physics & Astronomy - Postgraduate 2013/14 - August 2013

The course is organised jointly by the School of Physics & Astronomy at the University of St Andrews and the School of Engineering and Physical Sciences at Heriot-Watt University. Each organisation will act in turn as lead organisation for the course. In 2013-14 the course will be led by Heriot-Watt, and in 2014-15 by St Andrews. Regardless of which institution leads the course, the first semester is spent at St Andrews, and the second semester at Heriot-Watt. For the M.Sc. degree a project is undertaken during the summer months, usually in industry, and is assessed in September.

Taught Element: 120 credits: PH5180 - PH5187

M.Sc.: 120 credits: PH5180 - PH5187

60 credits: PH5177 (www.st-andrews.ac.uk/physics/msc)

[Note that PH5184 - PH5187 are carried out at Heriot-Watt University under their own module numbers.]

Photonics Eng.D.

www.photonics-engd.hw.ac.uk/

The Eng.D. degree in Photonics is a 4-year course involving a blend of specialist postgraduate training in all aspects of photonics, tailored to the needs of the photonics industrial sector, and a significant, challenging and original research project undertaken as a partnership between industry and academia. Each research project provides experience in project management (including financial management) and teamwork as well as the opportunity to gain greater understanding of photonics and the business context in which the research is conducted. A significant proportion of the student's time (typically around 70%) is spent within the sponsoring company.

Graduates from the programme will have gained an in-depth understanding of the fundamental properties of photonic materials and practical experience of the technology and operation of a wide range of photonic devices. They will additionally have had extensive experience of research in an industrial environment and have received training in the transferable skills required in such an environment.

The course is organised jointly by the School of Physics & Astronomy of the University of St Andrews, the School of Engineering and Physical Sciences at Heriot-Watt University, and the Department of Electronics and Electrical Engineering at the University of Strathclyde. St Andrews will normally be the location for the start of the course and will provide full time teaching during the first semester of the first year of the course. When this initial semester is completed students move to their industrial location and begin their research. They also take during the next five semesters the balance of the taught component of the Eng.D. either by distance learning or via short courses offered by Heriot-Watt and St Andrews.

The course is approved by the Engineering and Physical Sciences Research Council (E.P.S.R.C.) and a number of EPSRC-funded studentships are available.

Eng.D. PH5181 Photonics Laboratory is a compulsory module, and students then normally choose 95 credits from PH5180, PH5182, PH5183, and PH5016. Students also take later in their programme modules chosen from those taught by Heriot-Watt University and the University of Strathclyde, and PH5209 and PH5208 which are distance learning courses that may be taken from St Andrews

Physics M.Sc.

Taught Element: A total of 120 credits from AS and PH modules at 4000 level and above, including at least 90 credits at 5000 level, the course of study to be approved by the Head of School.

M.Sc.: 120 credits as for Taught Element together with a dissertation (PH5301) comprising 3 months full-time study and worth 60 credits.

Astronomy (AS) Modules

AS5001 Advanced Data Analysis				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
This module develops an understanding of basic concepts and offers practical experience with the techniques of quantitative data analysis. Beginning with fundamental concepts of probability theory and random variables, practical techniques are developed for using quantitative observational data to answer questions and test hypotheses about models of the physical world. The methods are illustrated by applications to the analysis of time series, imaging, spectroscopy, and tomography datasets. Students develop their computer programming skills, acquire a data analysis toolkit, and gain practical experience by analyzing real datasets.				
Programme module type:	Optional for taught postgraduate programmes in the School.			
Pre-requisite(s):	Familiarity with scientific programming language essential, for example through AS3013 Computational Astrophysics or PH4030 or PH3080 Computational Physics. Entry to an MPhys programme or entry to a taught postgraduate programme in the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials and some supervised computer lab sessions			
Assessment pattern:	Coursework = 100%			
Module Co-ordinator:	Prof K D Horne			
Lecturer(s)/Tutor(s):	Prof K D Horne			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

AS5002 Magnetofluids and Space Plasmas				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>This module is aimed at both physics and astrophysics students with interests in the physics of plasmas. The interaction of a magnetic field with an ionized gas (or plasma) is fundamental to many problems in astrophysics, solar- terrestrial physics and efforts to harness fusion power using tokamaks. The syllabus comprises: Solar-like magnetic activity on other stars. The basic equations of magneto-hydrodynamics. Stellar coronae: X-ray properties and energetics of coronal loops. Energetics of magnetic field configurations. MHD waves and propagation of information. Solar and stellar dynamos: mean field models. Star formation: properties of magnetic cloud cores, magnetic support. Physics of accretion discs: transport of mass and angular momentum. Accretion on to compact objects and protostars. Rotation and magnetic fields in protostellar discs. Rotation distributions of young solar-type stars. Magnetic braking via a hot, magnetically channelled stellar wind.</p>				
Programme module type:	Optional for taught Postgraduate programmes within the School.			
Pre-requisite(s):	(PH2012 or MT3601), (PH3075 or MT2003), PH4031 is strongly recommended. Entry to an M.Phys. Programme or a taught postgraduate programme in the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials.			
Assessment pattern:	2-hour Written Examination = 100%			
Module Co-ordinator:	Prof M M Jardine			
Lecturer(s)/Tutor(s):	Prof M M Jardine			

AS5003 Contemporary Astrophysics				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Available only to M.Phys. Astronomy students or a taught postgraduate programme in the School.			
Planned timetable:	To be arranged.			
<p>This module will provide an annual survey of the latest, most interesting, developments in astronomy and astrophysics at the research level. Emphasis will be placed upon the application of knowledge and expertise gained by students in their other modules to these current research topics.</p>				
Programme module type:	Optional for taught Postgraduate programmes in the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures and some tutorials			
Assessment pattern:	2-hour Written Examination = 100%			
Module Co-ordinator:	Dr C Helling			
Lecturer(s)/Tutor(s):	Dr C Helling, Dr A Vidotto, Dr S Gregory			

Physics (PH) Modules

PH5002 Foundations of Quantum Mechanics				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
This module consists of seven parts: (i) classical and quantum systems; (ii) vector spaces, Hilbert spaces, operators and probability; (iii) basic postulates of quantum mechanics for observables with discrete spectra; (iv) illustrative examples; (v) treatment of continuous observables in terms of probability distribution functions and the spectral functions; (vi) quantum theory of orbital and spin angular momenta, Pauli-Schrodinger equation and its applications; (vii) introduction to relativistic quantum mechanics.				
Programme module type:	Optional for some taught Postgraduate programmes in the School.			
Required for:	Recommended, but not required, for PH5004			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials.			
Assessment pattern:	2-hour Written Examination = 100%			
Module Co-ordinator:	Dr K K Wan			
Lecturer(s)/Tutor(s):	Dr K K Wan			

PH5003 Group Theory				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
This module explores the concept of a group, including groups of coordinate transformations in three-dimensional Euclidean space; the invariance group of the Hamiltonian operator; the structure of groups: subgroups, classes, cosets, factor groups, isomorphisms and homomorphisms, direct product groups; introduction to Lie groups, including notions of connectness, compactness, and invariant integration; representation theory of groups, including similarity transformations, unitary representations, irreducible representations, characters, direct product representations, and the Wigner-Eckart theorem; applications to quantum mechanics, including calculation of energy eigenvalues and selection rules.				
Programme module type:	Optional for taught Postgraduate programmes in the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials.			
Assessment pattern:	2-hour Written Examination = 100%			
Module Co-ordinator:	Prof J F Cornwell			
Lecturer(s)/Tutor(s):	Prof J F Cornwell			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5004 Quantum Field Theory				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
This module presents an introductory account of the ideas of quantum field theory and of simple applications thereof, including quantization of classical field theories, second quantization of bosons and fermions, the failure of single particle interpretation of relativistic quantum mechanics, solving simple models using second quantization, Feynman's path integral approach to quantum mechanics and its relation to classical action principles, field integrals for bosons and fermions, the relationship between path integral methods and second quantization, and a descriptive introduction to Feynman Diagrams in quantum field theory and many-body physics.				
Programme module type:	Optional for taught Postgraduate programmes in the School.			
Co-requisite(s):	PH5002 is recommended but not compulsory.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials.			
Assessment pattern:	2-hour Written Examination = 90%, Coursework = 10%			
Module Co-ordinator:	Dr J M J Keeling			
Lecturer(s)/Tutor(s):	Dr J M J Keeling			

PH5005 Laser Physics 2				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
Quantitative treatment of laser physics embracing both classical and semiclassical approaches; transient/dynamic behaviour of laser oscillators including relaxation oscillations, amplitude and phase modulation, frequency switching, Q-switching, cavity dumping and mode locking; design analysis of optically-pumped solid state lasers; laser amplifiers including continuous-wave, pulsed and regenerative amplification; dispersion and gain in a laser oscillator - role of the macroscopic polarisation; unstable optical resonators, geometric and diffraction treatments; quantum mechanical description of the gain medium; coherent processes including Rabi oscillations; semiclassical treatment of the laser; tunable lasers.				
Programme module type:	Optional for taught Postgraduate programmes in the School.			
Anti-requisite(s):	PH5018, PH5180			
Learning and teaching methods and delivery:	Weekly contact: 4 lectures or tutorials.			
Assessment pattern:	2.5-hour (open notes) Examination = 100%			
Module Co-ordinator:	Dr B D Sinclair			
Lecturer(s)/Tutor(s):	Dr B D Sinclair, Prof M H Dunn, Dr C T A Brown, Prof T F Krauss			

PH5011 General Relativity				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>This module covers: inertial frames, gravity, principle of equivalence, curvature of spacetime; basic techniques of tensor analysis; Riemannian spaces, metric tensor, raising and lowering of indices, Christoffel symbols, locally flat coordinates, covariant derivatives, geodesics, curvature tensor, Ricci tensor, Einstein tensor; fundamental postulates of general relativity: spacetime, geodesics, field equations, laws of physics in curved spacetime; distances, time intervals, speeds; reduction of equations of general relativity to Newtonian gravitational equations; Schwarzschild exterior solution, planetary motion, bending of light rays, time delays; observational tests of general relativity; Schwarzschild interior solution, gravitational collapse, black holes.</p>				
Programme module type:	Optional for taught Postgraduate programmes in the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials.			
Assessment pattern:	2-hour Written Examination = 100%			
Module Co-ordinator:	Dr H Zhao			
Lecturer(s)/Tutor(s):	Dr H Zhao			

PH5012 Quantum Optics				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>Quantum optics is the theory of light that unifies wave and particle optics. Quantum optics describes modern high-precision experiments that often probe the very fundamentals of quantum mechanics. The module introduces the quantisation of light, the concept of single light modes, the various quantum states of light and their description in phase space. The module considers the quantum effects of simple optical instruments and analyses two important fundamental experiments: quantum-state tomography and simultaneous measurements of position and momentum.</p>				
Programme module type:	Optional for a Taught Postgraduate programme within the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures or tutorials.			
Assessment pattern:	2-hour Written Examination = 100%			
Module Co-ordinator:	Dr N Korolkova			
Lecturer(s)/Tutor(s):	Dr N Korolkova, Dr F E W Koenig			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5014 The Interacting Electron Problem in Solids				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>The aim of this module is to give an overview of developments in modern condensed matter physics. The difficulties of a full quantum mechanical treatment of electrons with strong interactions will be discussed. Common existing approaches such as the Hubbard and t-J models and Fermi liquid theory will be compared. It will be shown that, although microscopic models can explain aspects of magnetism, they have little chance of capturing many other features of the fascinating low-energy physics of these systems. Instead, we introduce the principle of emergence, and show how it suggests radically new approaches to the problem of complexity in condensed matter physics and beyond. In this module, formal lectures will be combined with reading assignments, and the assessment will be based on marked homework together with an oral presentation followed by questions.</p>				
Programme module type:	Optional for Taught Postgraduate programmes in the School.			
Pre-requisite(s):	PH3002, PH3061, PH3062 or equivalent			
Learning and teaching methods and delivery:	Weekly contact: 2 lectures and some tutorials.			
Assessment pattern:	Coursework = 50%, Presentation plus Oral Examination = 50%			
Module Co-ordinator:	Dr C A Hooley			
Lecturer(s)/Tutor(s):	Dr C A Hooley			

PH5015 Applications of Quantum Physics				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>Quantum physics is one of the most powerful theories in physics yet is at odds with our understanding of reality. In this module we show how laboratories around the world can prepare single atomic particles, ensembles of atoms, light and solid state systems in appropriate quantum states and observe their behaviour. The module includes studies of laser cooling, Bose-Einstein condensation, quantum dots and quantum computing. An emphasis throughout will be on how such quantum systems may actually turn into practical devices in the future. The module will include assessment based on tutorial work and a short presentation on a research topic.</p>				
Programme module type:	Optional for Taught Postgraduate programmes in the School.			
Learning and teaching methods and delivery:	Weekly contact: 2 lectures and some tutorials.			
Assessment pattern:	2-hour Written Examination = 80%, Coursework = 20%			
Module Co-ordinator:	Prof K Dholakia			
Lecturer(s)/Tutor(s):	Prof K Dholakia, Dr M Mazilu			

PH5016 Biophotonics				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>The module will expose students to the exciting opportunities offered by applying photonics methods and technology to biomedical sensing and detection. A rudimentary biological background will be provided where needed. Topics include fluorescence microscopy and assays including time-resolved applications, optical tweezers for cell sorting and DNA manipulation, photodynamic therapy, lab-on-a-chip concepts and bio-MEMS. Two thirds of the module will be taught as lectures, including guest lectures by specialists, with the remaining third consisting of problem-solving exercises, such as writing a specific news piece on a research paper, assessed tutorial sheets and a presentation. A visit to a biomedical research laboratory using various photonics methods will also be arranged.</p>				
Programme module type:	Optional for Taught Postgraduate programmes within the School Optional for Eng.D. Programme			
Learning and teaching methods and delivery:	Weekly contact: 2 lectures and some tutorials.			
Assessment pattern:	2-hour Written Examination = 80%, Coursework = 20%			
Module Co-ordinator:	Prof K Dholakia			
Lecturer(s)/Tutor(s):	Prof K Dholakia and Dr C Penedo-Esteiro			

PH5022 Organic Semiconductors and Liquid Crystal Displays				
SCOTCAT Credits:	10	SCQF Level 11	Semester:	1
Academic year:	2014-15			
Planned timetable:	To be arranged.			
<p>This "distance-learning" module describes the materials science and device physics that underpins modern display technologies. The module is delivered in a distance learning format. The syllabus includes a basic introduction to vector calculus for materials science and an overview of types of displays and characterisation of display properties. The module then focuses on two contemporary display technologies: liquid crystals and organic semiconductors. Topics covered include: semiconducting polymers; photoluminescence and electroluminescence; organic light-emitting diodes; liquid crystals phases; director, order-parameter and distortions; anisotropy and birefringence; operation of twisted nematic displays.</p>				
Programme module type:	Optional for Materials Chemistry			
Anti-requisite(s):	PH4027			
Learning and teaching methods and delivery:	Weekly contact: fortnightly tutorials			
Assessment pattern:	1.5-hour Written Examination = 100%			
Module Co-ordinator:	Dr G A Turnbull			
Lecturer(s)/Tutor(s):	Dr G A Turnbull			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5177 Research Project (POED M.Sc.)				
SCOTCAT Credits:	60	SCQF Level 11	Semester:	Summer
Academic year:	2013/4			
Availability restrictions:	This project module is organised and assessed with St Andrews as the lead institution in 2014/15 and alternate years thereafter. It is available only to those in the POED MSc programme.			
Planned timetable:	Placement, full time.			
All M.Sc. students carry out a ~3-month research project, in most cases carried out at a U.K. company. Part-time students who are industry employees may carry out the project at their own company. Students will have completed a literature survey prior to the project, and write a dissertation on the project which is assessed in September.				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programme.			
Pre-requisite(s):	Satisfactory completion of the taught element of Photonics and Optoelectronic Devices M.Sc. programme .			
Learning and teaching methods and delivery:	Weekly contact: About 40 hours a week working on the project, with appropriate levels of supervision			
Assessment pattern:	Dissertation and Oral Examination = 100%			
Module Co-ordinator:	Dr B D Sinclair			
Lecturer(s)/Tutor(s):	Dr B D Sinclair			

PH5180 Laser Physics				
SCOTCAT Credits:	20	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	10.00 am Mon, Tue, Wed, Thu.			
This module presents a description of the main physical concepts upon which an understanding of laser materials, operations, and applications can be based. These concepts include a treatment of light-matter interaction, gain, absorption and refractive index, rate-equation theory of lasers, gain and its saturation, frequency selection and tuning in lasers, transient phenomena, resonator and beam optics, and the principles and techniques of ultrashort pulse generation and measurement.				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programmes. Optional for Eng.D. Programme			
Pre-requisite(s):	Admission to a Taught Postgraduate programme within the School.			
Learning and teaching methods and delivery:	Weekly contact: 4 lectures each week and occasional tutorials.			
Assessment pattern:	Coursework = 20%, 2.5-hour open-notes Examination = 80%			
Module Co-ordinator:	Dr B D Sinclair			
Lecturer(s)/Tutor(s):	Dr B D Sinclair, Prof M H Dunn, Prof T F Krauss, Dr C T A Brown			

PH5181 Photonics Laboratory 1				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	2.00 pm - 5.30 pm Mon, Tue and Thu.			
<p>The photonics teaching laboratory gives training in the experimental photonics, and allows students the opportunity to explore photonics practically in a series of chosen open-ended investigations. Students use their knowledge and skills from the lecture modules, supplemented by additional reading, to investigate relevant photonic effects. Phase I involves work in small groups in introductory areas, then phase II allows primarily individual investigation of topics such as the second harmonic generation, optical parametric oscillation, erbium amplifiers, Nd lasers, optical tweezers, spectroscopy, remote sensing of speed, Bragg reflectors, and holography. A formal lab report is included.</p>				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programmes. Compulsory for Eng.D. Programme.			
Pre-requisite(s):	Admission to a Taught Postgraduate programme within the School.			
Learning and teaching methods and delivery:	Weekly contact: 3 x 2.5-hour practicals.			
Assessment pattern:	Coursework = 100%			
Module Co-ordinator:	Dr B D Sinclair			
Lecturer(s)/Tutor(s):	Dr B D Sinclair and others			

PH5182 Displays and Nonlinear Optics				
SCOTCAT Credits:	10	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	To be arranged.			
<p>The physics of polymers and liquid crystals is covered, showing the way to the use of semi-conducting polymers as light emitters, and the use of liquid crystals in displays and spatial light modulators. The nonlinear optics section of this module describes the physical ideas and application of second and third order nonlinear optics, including phenomena such as harmonic generation, parametric gain, saturated absorption, nonlinear refraction, Raman scattering, and optical solitons. The final section looks at second order nonlinear effects being exploited in optical parametric amplifiers and oscillators in the optical and THz regions.</p>				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programmes. Optional for Eng.D. Programme			
Pre-requisite(s):	Admission to a Taught Postgraduate programme within the School.			
Learning and teaching methods and delivery:	Weekly contact: 2 lectures and occasional tutorials.			
Assessment pattern:	Coursework = 20%, 2-hour Examination = 80%			
Module Co-ordinator:	Prof I D W Samuel			
Lecturer(s)/Tutor(s):	Prof I D W Samuel, Prof M H Dunn, Dr C F Rae			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5183 Photonics Applications				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	This module is intended for students in the final year of an M.Phys. or M.Sci. programme involving the School, for those in the M.Sc. in Photonics and Optoelectronic Devices M.Sc., and for those on the Eng.D. degree in Photonics.			
Planned timetable:	To be arranged.			
<p>Students on this module choose to do two of the following three sections:</p> <p>Microphotonics and Plasmonics: This covers the Bragg effect, multilayer mirrors, defects causing confined cavity states, periodicity leading to bandstructure, scaling of bandstructure in reduced frequency, Bloch modes and photonic bandgap. It then considers photonic crystal waveguides, photonic crystal fibres, and supercontinuum generation in photonic crystal fibres. Plasmonics is based on oscillations of the free electronics in a metallic material. Resonances of Plasmons are the basis for a new class of materials called 'Metamaterials'. These are compared with photonic crystals. Applications include super-resolution imaging, optical cloaking, sensing, and surface enhanced Raman scattering.</p> <p>Biophotonics: This will introduce students to the exciting opportunities offered by applying photonics methods and technology to biomedical sensing and detection. A rudimentary biological background will be provided where needed. Topics include fluorescence microscopy and assays including time-resolved applications, optical tweezers for cell sorting and DNA manipulation, photodynamic therapy, lab-on-a-chip concepts and bio-MEMS.</p> <p>Optical Trapping and Atom Optics: Quantum physics is one of the most powerful theories in physics yet is at odds with our understanding of reality. In this course we show how laboratories around the world can prepare single atomic particles, ensembles of atoms, light and solid state systems in appropriate quantum states and observe their behaviour. The material includes optical cooling and trapping of atoms and ions, Fermi gases, studies of Bose-Einstein condensation, and matter-wave interferometry.</p> <p>Students must not cover Biophotonics in both this module and PH5016/PH5264, and must not cover Optical Trapping and Atom Optics in both this module and PH5015/PH5267.</p>				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programme. Optional for Eng.D. Programme			
Learning and teaching methods and delivery:	Weekly contact: 3 lectures and occasional tutorials.			
Assessment pattern:	Coursework = 20%, 2-hour Written Examination = 80%			
Module Co-ordinator:	Prof K Dholakia			
Lecturer(s)/Tutor(s):	Prof K Dholakia, Dr A di Falco, Dr C Penedo-Esteiro, Dr W Whelan-Curtain			

PH5209 Polymers and Liquid Crystals for Displays - Distance Learning				
SCOTCAT Credits:	5	SCQF Level 11	Semester:	1
Academic year:	2014/15			
Availability restrictions:	distance learning			
Planned timetable:	To be arranged.			
This is a distance learning module covering the concepts of optoelectronic display devices, including semiconducting polymers, and the properties of liquid crystals.				
Programme module type:	Optional for Engineering Doctorate in Photonics Postgraduate Taught Programme. Postgraduate level module available online			
Pre-requisite(s):	Admission to a Taught Postgraduate programme within the School.			
Learning and teaching methods and delivery:	Weekly contact: Material, tutorial support, and Coursework delivered at a distance by means of Moodle. Students are responsible for ensuring they have internet access. The module covers material equivalent to that covered in 12 conventional lectures.			
Assessment pattern:	Coursework = 40%, 2-hour Examination= 60%			
Module Co-ordinator:	Dr G A Turnbull			
Lecturer(s)/Tutor(s):	Dr G A Turnbull			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5260 EMSP Research Skills				
SCOTCAT Credits:	8	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	To be arranged.			
<p>This module is conducted in self-study and supported by informal tutorial sessions. The module consists of 3 parts, a) Research into a specific topic in semiconductor photonics, which builds on previously learned material by recognising how the corresponding concepts are applied in advanced devices. b) Conduct a literature search in the field of study related to the project which you will conduct in the fourth semester. Establish the state-of-the-art in the field and put your project into context. Critically assess the relevant literature and write a report. c) give a presentation on the content of the literature search and outline the project strategy.</p>				
Programme module type:	Compulsory for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the European Master of Science in Photonics programme.			
Learning and teaching methods and delivery:	Weekly contact: 3 tutorials over 6 weeks.			
Assessment pattern:	Coursework = 100%			
Module Co-ordinator:	Dr A Di-Falco			
Lecturer(s)/Tutor(s):	Dr A Di-Falco and others			

PH5261 EMSP Research Project				
SCOTCAT Credits:	60	SCQF Level 11	Semester:	2
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	5-month long project.			
<p>This module comprises a 5-month long research project that is conducted in self-study and supported by a project supervisor (to be determined). It comprises the analysis of a problem provided by the supervisor and builds on the preparation conducted in the first semester (PH5260). The student will conduct a series of experiments to develop and test possible solutions to the problem provided. The methods employed and solutions developed during the project will be described in a report and the findings be presented as an oral presentation at the summer school.</p>				
Programme module type:	Compulsory for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the European Master of Science in Photonics programme.			
Learning and teaching methods and delivery:	Weekly contact: 40 hours research work			
Assessment pattern:	Coursework = 100%			
Module Co-ordinator:	Dr A Di-Falco			
Lecturer(s)/Tutor(s):	Photonics staff			

PH5262 EMSP Advanced Photonics Laboratory				
SCOTCAT Credits:	20	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	2.00 pm - 5.30 pm Mon, Tue and Thu.			
<p>This module allows students to explore the science and engineering of photonics through experimentation in an advanced teaching laboratory. The module is a medium for self-driven learning and discovery through usually open-ended practical work and associated reading and computation, and aims to give practice in relevant experimental techniques. Furthermore, it will give experience in data handling, including estimates of uncertainty and give experience of some aspects of experimental design. It should stimulate and maintain an interest in laser physics and optoelectronics, and should develop the practical skills required to conduct independent research in a photonics laboratory.</p> <p>Investigations may include work using cw and pulsed lasers, interferometry, holography, optical trapping, semiconductor optoelectronics, biophotonics, spectroscopy, clean-room techniques, etc.</p>				
Programme module type:	Compulsory for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the second year of the EMSP programme.			
Learning and teaching methods and delivery:	Weekly contact: 10.5 hours per week for 11 weeks.			
Assessment pattern:	Coursework = 100% (marked experiments)			
Module Co-ordinator:	Dr B D Sinclair			
Lecturer(s)/Tutor(s):	Dr B D Sinclair and others			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5263 EMSP Nanophotonics				
SCOTCAT Credits:	8	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	11.00 am Wed and Fri.			
<p>Nanophotonics based on nanostructured materials such as photonic crystals or plasmonic metamaterials is a hot topic in contemporary photonics. The fascination arises from the fact that the properties of these materials can be designed to a significant extent via their structure. While photonic crystals are made of dielectric materials, plasmonic structures are typically made of metals. Many of the properties of these nanostructured materials can be understood from their dispersion diagram or optical bandstructure, which is a core tool that will be explored in the module. Familiar concepts such as multilayer mirrors and interference effects will be used to explain the more complex features such as slow light propagation, high Q cavities in photonic crystal waveguides and supercontinuum generation in photonic crystal fibres. Similarly, the concepts of propagating and localised plasmons and their properties will be explained and expanded to include the novel effects of superlensing and optical cloaking in metamaterials. This advanced module capitalises on current research in the School.</p>				
Programme module type:	Optional for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the second year of the EMSP programme.			
Learning and teaching methods and delivery:	Weekly contact: 2 hours of lectures per week for 8 weeks.			
Assessment pattern:	Coursework = 20%, 1-hour Examination = 80%			
Module Co-ordinator:	Dr A di Falco			
Lecturer(s)/Tutor(s):	Dr A di Falco and Dr W Whelan-Curtain			

PH5264 EMSP Biophotonics				
SCOTCAT Credits:	10	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	9.00 am Mon, Wed, Fri.			
<p>The module will expose students to the exciting opportunities offered by applying photonics methods and technology to biomedical sensing, therapy and detection. A rudimentary biological background will be provided where needed. Topics include different microscopy techniques employed in biophotonics research, such as fluorescence microscopy and confocal microscopy, as well as related techniques such as optical coherence tomography (OCT) and two-photon effects. The module covers a number of optical detection methods, based e.g. on fluorescence and interferometry, as well as the basics of biochemical sensitisation and tagging, which leads to topics such as lab-on-a-chip, microarrays and microfluidics incl. optical trapping. The module includes guest lectures by specialists e.g. cell biology and DNA, as well as problem-solving exercises, including a short critique of a contemporary biophotonics research paper and a presentation by students on a research topic related to the content of the module.</p>				
Programme module type:	Optional for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the second year of the EMSP programme.			
Learning and teaching methods and delivery:	Weekly contact: 2 - 3 hours of lectures per week for 11 weeks.			
Assessment pattern:	Coursework = 20%, 2-hour Examination = 80%			
Module Co-ordinator:	Prof K Dholakia			
Lecturer(s)/Tutor(s):	Prof K Dholakia and C Penedo-Esteiro			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5265 EMSP Solar Power				
SCOTCAT Credits:	6	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Planned timetable:	All day 31/10/2013 and 1/11/13.			
<p>This module will introduce students to the societal need and the economics of solar power, then enter into the fundamental limitations of solar cells, such as the Shockley limit for a single junction solar cell and how it is addressed using multifunction cells. This is followed by methods of characterising solar cells. The light-trapping problem will be discussed next and how it is addressed using photonic nanostructures (random scatterer, diffractive, plasmonic structures) and "black silicon". Finally, the students will be introduced to different solar cell materials and their specific requirements, e.g. organic semiconductors, organic/inorganic hybrids, dye-sensitised cells and more "exotic" materials such as CdTe and CIGS. The module includes 3 off 2h laboratory sessions reinforcing key solar cell concepts. Overall, the students will gain insight into key aspects of solar cell operation and be exposed to some of the current research trends.</p>				
Programme module type:	Optional for European Master of Science in Photonics			
Pre-requisite(s):	Admission to a Taught Postgraduate or M.Phys./M.Sci. programme within the School			
Learning and teaching methods and delivery:	Weekly contact: 2-day residential workshop + 1 afternoon of presentation.			
Assessment pattern:	Coursework = 100% (tutorial sheets = 50%, project presentation = 50%)			
Module Co-ordinator:	Prof I D W Samuel			
Lecturer(s)/Tutor(s):	Prof I D W Samuel and others			

PH5266 EMSP Quantum Optics				
SCOTCAT Credits:	10	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	11.00 am Mon, Tue, Thu.			
<p>The module introduces the quantisation of light, the concept of single light modes, the various quantum states of light and their description in phase space. The module considers the quantum effects of simple optical instruments and analyses two important fundamental experiments: quantum-state tomography and simultaneous measurements of position and momentum. In detail, the content covers the quantum version of Maxwell's equations, the quantisation of light modes, single quantum states of light, different single-mode states (quadrature states, Fock states, coherent states), zero-point energy and the Casimir force. Quasiprobability distributions in phase space include the Wigner representation and other quasiprobability distributions (Glauber P-function, Husimi Q-function, s-parametrised quasi-probability distributions) Simple optical instruments, such as beam splitters, amplitude and quadrature detection and quantum-state tomography are considered in this framework.</p> <p>Irreversible processes include a discussion of Lindblad's theorem, loss and gain and continuous quantum measurements. Finally, the module covers entanglement, parametric amplifiers and polarisation correlations. Homework problems and questions are provided for student's individual study to improve module understanding. They are then discussed during the whole class tutorial sessions (at least 3).</p>				
Programme module type:	Optional for European Master of Science in Photonics			
Pre-requisite(s):	Admission to the EMSP programme and previous training in quantum mechanics equivalent to PH3061, PH3062, PH4028			
Learning and teaching methods and delivery:	Weekly contact: 3 hours of lectures per week for 11 weeks.			
Assessment pattern:	2-hour Examination = 100%			
Module Co-ordinator:	Dr N Korolkova			
Lecturer(s)/Tutor(s):	Dr N Korolkova, Dr F E W Koenig			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5267 EMSP Applications of Quantum Physics				
SCOTCAT Credits:	10	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme.			
Planned timetable:	12.00 noon Mon, Tue, Thu.			
<p>The module begins with the Statistics of light: coherence; First and second order correlation functions; Chaotic light; coherent light; Photon statistics; Sub and super Poissonian light; Photon bunching and antibunching. Quantum cryptography. Entangled states. Single photon sources. Then follows a discussion of laser cooling and Bose-Einstein condensation (BEC) explaining basic laser cooling, Doppler theory, sub Doppler cooling, magneto-optical traps. Quantum mechanical complementarity (which-way experiments). Evaporative cooling, magnetic trapping. Signatures of BEC and Fermi gases. Matter wave interference. Wave-particle duality studies. Charged ion trapping. Studies of laser cooled ions in traps. Quantum jumps. Atom lasers.</p>				
Programme module type:	Optional for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the EMSP programme and previous training in quantum mechanics equivalent to PH3061, PH3062			
Learning and teaching methods and delivery:	Weekly contact: 3 hours of lectures.			
Assessment pattern:	Coursework = 20% (tutorials and 15-minute presentation), 2-hour Examination = 80%			
Module Co-ordinator:	Prof K Dholakia			
Lecturer(s)/Tutor(s):	Prof K Dholakia, Dr M Mazilu			

PH5268 EMSP Nonlinear Optics				
SCOTCAT Credits:	10	SCQF Level 11	Semester:	1
Academic year:	2013/4			
Availability restrictions:	Admission to the second year of the European Master of Science in Photonics programme			
Planned timetable:	12.00 am - 3.00 pm selected Wed.			
<p>This module comprises an introduction, and the following topics: Origin of optical non-linearity: microscopic model, resonant and non-resonant nonlinearity. Polarisation and susceptibility: general description of macroscopic polarisation, symmetry properties of non-linear susceptibility, non-linear wave equation (slowly varying envelope approximation). Second order effects: Coupled wave equations, phase matching methods, Manley-Rowe, sum frequency and second harmonic generation, difference frequency generation and parametric amplification. Third order effects: four-wave mixing, Intensity dependent refractive index, self-focusing, self-phase modulation, bistability, supercontinuum and comb generation. Non-linear scattering: spontaneous and stimulated scattering, phonons, Brillouin scattering, Raman scattering. Resonant (or indirect) optical non-linearities: non-linearities induced by plasma effect, and filling effects, thermo-optic effect, optical forces etc. Non-linear optical materials: glasses, semiconductors, ferroelectrics, polymers. High harmonic generation; generation of extreme UV light. The lectures are video-conferenced from Ghent, with tutorial support provided locally.</p>				
Programme module type:	Optional for the European Master of Science in Photonics			
Pre-requisite(s):	Admission to the second year of the European Master of Science in Photonics programme			
Learning and teaching methods and delivery:	Weekly contact: 2.5 hour lectures and some tutorials			
Assessment pattern:	Coursework = 50%, 2-hour Examination = 50%			
Module Co-ordinator:	Dr A di Falco			
Lecturer(s)/Tutor(s):	Dr A di Falco			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5301 Dissertation for M.Sc. Programme				
SCOTCAT Credits:	60	SCQF Level 11	Semester:	2
Academic year:	2013/4			
Availability restrictions:	By arrangement			
Planned timetable:	To be arranged.			
This dissertation will be supervised by a member of academic staff who will advise on the choice of subject and provide guidance during the work. The completed dissertation of not more than 15,000 words must be submitted by the stated date in August.				
Programme module type:	Compulsory for M.Sc. Physics Postgraduate Taught Programme.			
Pre-requisite(s):	Admission to a Taught Postgraduate programme within the School.			
Learning and teaching methods and delivery:	Weekly contact: Weekly meetings with supervisor			
Assessment pattern:	Dissertation and Oral Examination = 100%			
Module Co-ordinator:	Dr A di Falco			
Lecturer(s)/Tutor(s):	Dr A di Falco			

PH5184 Photonics Experimental Laboratory 2 (B21HL)				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	2
Academic year:	2013/4			
Availability restrictions:	Available only to students on the Photonics and Optoelectronics programme			
Planned timetable:	To be arranged.			
This module is taught at Heriot-Watt University, and forms part of certain taught Master's degrees run collaboratively between St Andrews and Heriot-Watt Universities.				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programmes.			
Pre-requisite(s):	Admission to the Photonics and Optoelectronics MSc.			
Learning and teaching methods and delivery:	Weekly contact: At Heriot-Watt University			
Assessment pattern:	Coursework = 100%			
Module Co-ordinator:	at Heriot-Watt University			

PH5185 Semiconductor Optoelectronic Devices (B21OD)				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	2
Academic year:	2013/4			
Availability restrictions:	Available only to students on the Photonics and Optoelectronics programme			
Planned timetable:	To be arranged.			
This module is taught at Heriot-Watt University, and may form part of certain taught Master's degrees run collaboratively between St Andrews and Heriot-Watt Universities.				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices and year one of Erasmus Mundus Master of Science in Photonics Postgraduate Taught Programmes.			
Pre-requisite(s):	Admission to the Photonics and Optoelectronics MSc.			
Learning and teaching methods and delivery:	Weekly contact: At Heriot-Watt University			
Assessment pattern:	3-hour Examination = 100%			
Module Co-ordinator:	at Heriot-Watt University			

PH5186 Modern Optics (B21FM)				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	2
Academic year:	2013/4			
Availability restrictions:	Available only to students on the Photonics and Optoelectronics programme			
Planned timetable:	To be arranged.			
This module is taught at Heriot-Watt University, and may form part of certain taught Master's degrees run collaboratively between St Andrews and Heriot-Watt Universities.				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programmes.			
Pre-requisite(s):	Admission to the Photonics and Optoelectronics MSc.			
Learning and teaching methods and delivery:	Weekly contact: At Heriot-Watt University			
Assessment pattern:	3-hour Examination = 100%			
Module Co-ordinator:	at Heriot-Watt University			

Physics & Astronomy - Postgraduate 2013/14 - August 2013

PH5187 Fibre Optic Communications (B21FC)				
SCOTCAT Credits:	15	SCQF Level 11	Semester:	2
Academic year:	2013/4			
Availability restrictions:	Available only to students on the Photonics and Optoelectronics programme			
Planned timetable:	To be arranged.			
This module is taught at Heriot-Watt University, and may form part of certain taught Master's degrees run collaboratively between St Andrews and Heriot-Watt Universities.				
Programme module type:	Compulsory for Photonics and Optoelectronic Devices Postgraduate Taught Programmes.			
Pre-requisite(s):	Admission to the Photonics and Optoelectronics MSc.			
Learning and teaching methods and delivery:	Weekly contact: At Heriot-Watt University			
Assessment pattern:	3-hour Examination = 100%			
Module Co-ordinator:	at Heriot-Watt University
