## Modules

### InterDisciplinary (ID) Modules

This School contributes to an inter-disciplinary module **ID2004 Science Ethics (Section 23)**

### Astronomy (AS) Modules

#### AS1001 Astronomy and Astrophysics 1

Credits:	20.0	Semester:	1
Prerequisites:	Higher Physics or AS-level Physics, and Higher or AS-Level Mathematics.		
Anti-requisite:	AS1002		
Description:	This module surveys our present state of knowledge of the orbits, surfaces and atmospheres of the planets in our solar system; the structure and evolution of the Sun and other stars, including extra-solar planetary systems; the bizarre menagerie of star-forming regions, violent stellar objects and supermassive black holes found within our own Milky Way Galaxy and in other galaxies; and the large-scale structure and ultimate fate of the expanding Universe. Throughout the module, fundamental observations are interpreted using simple but powerful geometric methods to show how distances and other properties of astronomical objects throughout the Universe have been measured, from the time of Copernicus to the era of the Hubble Telescope and beyond.		
Class Hour:	11.00 am		
Teaching:	Four lectures, one tutorial and one laboratory.		
Assessment:	Laboratory work = 25%, Continuous Assessment = 15%, 2 Hour Examination = 60%		
Re-Assessment:	Laboratory work = 25%, 2 Hour Examination = 75%		

## **Physics & Astronomy – 1000 & 2000 Level 2008/09 – August 2008**

Credits:	30.0	Semester:	1
Prerequisites:	AS1001, PH1011, PH1012 and MT1002; alternatively (for the PH and MT modules) passes in Advanced Higher Physics and Mathematics or in A-level Physics and Mathematics, both normally at grade A.		
Description:	This module comprises four lecture courses which extend knowledge gained in the first level module AS1001, and discuss recent developments in the subject: (i) observational techniques - modern telescopes, instruments and detectors for gamma-, X-, uv, optical, IR and radio radiation; spherical astronomy and essential coordinate systems; (ii) the structure and evolution of stars - nucleosynthesis, stellar properties as a function of age, a complete understanding of the HR diagram; (iii) the chemical evolution of the Universe - abundances from the Big Bang to the present; (iv) galactic astronomy - the distribution and motion of stars, gas, dust, and dark matter in our Milky Way and other galaxies.
